

HIGH PRESSURE SCREW COMPRESSOR

GH-Series

is a series of oil injection type screw compressors capable of running continuously at a discharge pressure of 50 barG. By employing a special rotor profile the GH-series enables a highly efficient operation. The GH-series compressors are designed for various gases: Hydrocarbons, Helium, Hydrogen, CO₂, NH₃ and others. Therefore these compressors are ideal for such applications as high pressure fuel gas supply to gas turbines, low temperature freezing systems on CO₂ with a defrost cycle, ammonia heat pumps, etc.

In the GH-series compressors we are using forged steel for the rotors and tilting pads for the thrust bearings¹⁾, which results in longer maintenance intervals and, consequently, lower running costs. The GH-series compressors are compliant with API619, EN-378 ATEX, NACE and other standards and are being successfully applied in a great number of fields.
